Hi Marylou,

Here is info to replace what you had. Thanks for checking with me.

-Martha

Washington Ecology Toxics Control Initiative - Martha Hankins from Washington Department of Ecology's Toxic Cleanup Program gave a presentation on the separate but coordinated ongoing processes: (1) review of fish consumption rates, (2) updates to the state's Sediment Management Standards, and (3) rulemaking for implementation tools for meeting water quality standards. Washington Ecology is currently accepting comments on a draft Fish Consumption Rate Technical Support Document (the comment period closed Jan 18, 2012) and is engaged in rulemaking for Sediment Management Standards under the Model Toxics Control Act, including fish consumption rates for use in setting sediment cleanup standards protective of human health. Work on updating human health criteria for water quality standards is not anticipated until after the implementation tools rulemaking is complete.

Martha:

Thanks!

I assume you are asking about the Feb 10 presentation at the OR Environmental Council Public Health Conference that you provided gracious help to me? The questions as I recall were focused on OR. There were not any interesting questions that I recall on the WA work. Here is a news article that was printed in a public health newsletter, fyi.

Mary Lour and Mike,

He is a draft of my recollection from the Dec. meeting . Please make any changes necessary and distribute with the notes.

Thanks,

Greg

Mike and Greg presented context for the upcoming Regional Executive meeting that would be in support of Columbia River Toxics Reduction Workgroup activities --this would be the second meeting of our Executives on this topic. The first meeting was a very successful forum which brought together a myriad of executives to share their entities involvement in toxics reduction activities. One of the outcomes of the first meeting was to extend an invitation to: BPA, USACE, and BOR for the second meeting planed for late summer or early fall 2012. The CRTRWG consensus in December 2011 was to frame the next Executive meeting on three themes: contaminant monitoring, toxic reduction activities, and legislative/politic support for CRTRWG activities. A standing working group representing each Executive would be charged with planing the next meeting which would take place in late summer or early fall. The standing team will identify 2 to 3 actions for each of the three themes. Diane Barton with CRITFC will look into sponsoring this standing team in what has been termed a "Strategy Planing Meeting" some time in June 2012. This planing meeting will be used to flesh out the specific actions for the follow-on Executive meeting.

Dear Mike and Greg:

Sorry about reminding you again, I made some changes and I was hopeful I could get you to write two or three sentences about your presentation in December.

Martha - please check me language and see if it is o.k. for posting.

thanks all!
